

Press Release

March 2008

Clean without touching

This year Franke is enhancing its touch-free stainless steel washroom accessories with a total of three new products. Easy to use and at the same time hygienic product solutions are playing an increasing role in equipping public and commercial sanitary rooms. Here the elegant and resistant stainless steel material in conjunction with the fittings or equipment are a convincing combination and require no touching by the user.

Franke electronically controlled stainless steel accessories with non-touch infrared proximity electronics provide clean results. Two electronic paper towel dispensers that are attractively shaped for the XINOX® and STRATOS ranges are now on offer. They feature maintenance free mechanics and an integrated serrated edge, which makes changing the paper roll a very simple. Paper length can be modified as required from 200 to 250 to 300 millimetres. Another innovation in the product range: an electronic CHRONOS soap dispenser, which can also be used for disinfectants.

Dispensing paper-towels or activating soap or disinfectants via infrared sensor-technology provides optimal hygienic conditions for the user and operator. A further advantage of the electronic XINOX® paper towel dispenser is the patented dirt and finger

prints resistant INOXplus® surface treatment, which is standard for this product range.
